

# 2021 First Quarter

After a punch in the gut from 2020, there is hope to be had. As I write this, there is no one at home in our company with Covid-19. True, that can always change, and we can't let our guard down. But, we will take every victory we can get.

## What are our 2021 Goals?

- **No Lost Time Injuries-keep it going**
- **No at Fault Vehicle Accidents**

## How are we doing?

- **No Lost Time Injuries!!!!!!!!!!!!!!**  
We have gone 41 months! Let's keep it rolling.

- **No at Fault Vehicle Accidents**  
As for this, we have had 2. Don't get discouraged about this, let's see if we can beat 6 months. That was our record for last year.

### **Remember-Green DOES NOT mean go!**

Both of our at fault accidents happened when the light turned green. The person in front of us started to go, then stopped and we rear ended them. Always expect the unexpected and keep your distance.

### **OSHA Recordable Injuries?**

After 3 months, we are at Zero! So, all our stats are 0 for the year! Our 3-year TRIR average is 1.3. The industry average is 3.6. Kudos to all!

Note: We did have a worker who was working with a volunteer assignment who did cut his finger with a pocket knife. Although it was not recordable on account of the chain of command, it still hurt. The lesson learned-no matter what or where you are working-use your gloves and get your free knife from the rewards site! You cannot cut your finger with this one! (self retracting blade) Only 20 points! That is only one months worth of points even if you are not even trying!

## KUDOS Corner

A picture can tell the story. Some nice SOR's that show our guys are getting it done safely! Notice the gloves in use with the meter and the PPE when grinding.

## What should we focus on?

**After the green fog disappears, (pollen) you know what comes next? HEAT! REMEMBER TO HYDRATE!**

### **Watch out for hidden skylights!**

**In 2020, 8 workers died in the US falling through skylights.**

**In 2019, 29 died.**

**Don't be a statistic! Keep your head on a swivel when on a roof. Remember, in service work, you need to be 15' away from an unprotected skylight.**
